

## Check Solar Net Meter Credits

With net metered solar, generated power is consumed locally reducing the utility bill. Any surplus power is exported to the grid for credit. Properly sized, the annual utility payment is zero. Install an NRGpilot portal to determine the purchased grid energy savings from solar generation and verify that the utility is applying the correct credits. Revenue grade meter data records are available should there be a discrepancy. Watch the [Net Meter video](#) to see how NRGpilot can ensure your solar PV investment is working properly and the right compensation is being received.

Check utility statements to ensure correct credits are received
